SUMMARY

Dedicated and adaptable Computer Applications student with a strong foundation in Python programming, database management, and web development. Demonstrates effective problem-solving abilities, teamwork, and a willingness to learn new technologies. Seeking opportunities to apply and enhance technical skills in a professional environment.

PROJECTS

ClimePlus — Real-Time Weather Prediction

- A real-time weather forecasting web app that fetches live data from the OpenWeatherAPI and present it through a clean, responsive interface.
- The Python Flask backend handles API requests and JSON data processing, while the HTML/CSS/JS frontend delivers an intuitive user experience with up-to-date weather insights.

Virtual AI Farm Twin

- A full-stack application that simulates a virtual digital twin of a farm environment powered by AI.
- Built with a React.js frontend and an Express.js backend, the system models farm conditions intelligently
- Enabling real-time monitoring, decision support, and predictive insights for smart agriculture.

Dog Emotion Detection (*Web-Based Deep Learning Project*)

- Developed a web application to detect dog emotions using MobileNetV2.
- Built the system using Flask (backend) and ReactJS (frontend).
- Used OpenCV and NumPy for image processing.
- Classified emotions such as Happy, Sad, Angry, and Relaxed. Added voice output for prediction results.
